

Innovative practices

Our School embodies the inspirational vision. The educational philosophy, evolved over thirty seven years of work in the educational arena, sees learning as an [EduCreative process](#) that nurtures each child's unique set of talents, strengths and skills.

Following Practices are adopted:

1. Creative Teaching

Exciting and interesting individual and group activities are conducted to enhance their creative thinking.

This is a time-tested method to identify every young student's creative abilities and encourage creative contributions. Bring aspects of creativity into all subjects.

Encourage different ideas, give them the freedom to explore.

2. Audio & Video Tools

We do use audio-visual materials to supplement textbooks during sessions, along with it we explore ourselves using different models, filmstrips, movies, pictures, infographics and other mind mapping and brain mapping tools. So as to boost their imagination.

3. “Real-World” Learning

To ignite the spark and get the children involved in activities we relate and demonstrate the topic through real life situations.

4. Brainstorm

When you have multiple brains focusing on one single idea, you are sure to get numerous ideas and will also involve everyone into the discussion. These sessions are a great platform for students to voice their thoughts without having to worry about right or wrong.

5. Classes Outside the Classroom

“Some lessons are best learnt, when they are taught outside of the classroom.”

We do organize field trips that are relevant to the lessons or just simply take students for a walk outside of the classroom.

Students find this fresh and exciting. Without taking much effort, they will learn and remember what is taught teach.

6. Role Play

Teaching through role-playing is a great way to make children step out of their comfort zone and develop their interpersonal skills.

This method comes in handy, especially when you are teaching literature, history or current events.

The role playing approach help a student understand how the academic material will be relevant to his everyday tasks

Role playing is most effective for students of almost any age group.

7. Storyboard Teaching

“If history were taught in the form of stories, it would never be forgotten.”

Storyboarding is a great way to teach any subject which requires step-by-step memorization or visualization highly-conceptual ideas.

History teachers can use a storyboard to recreate a famous event. Such visually stimulating activity ensure that even complex ideas are easily put across to students.

We encourage the use of storyboards as a form of communication and let the students tell a story in pictures using their imagination.

8. Activity Based learning

A classroom environment that is well-decorated, fun, and engaging that help stimulate a student’s mind and make them learn better.

Such a creative and stimulating environment helps them explore think positively.
